

Experiment 15: Feed Forward Neural Network

Aim

To implement a Feed Forward Neural Network using Python.

Objective

To classify data using a simple Feed Forward Neural Network.

Algorithm

1. Import the required libraries.
 2. Create the input and output data.
 3. Build the neural network.
 4. Train the model.
 5. Predict the output.
 6. Display the result.

Stop

Code and Output

```
from sklearn.neural_network import MLPClassifier

X = [[0], [1], [2], [3]]
y = [0, 0, 1, 1]

model = MLPClassifier(max_iter=1000)
model.fit(X, y)

print(model.predict([[2]]))
```

... [1]

Result

The Feed Forward Neural Network classified the input successfully.

Conclusion

The Feed Forward Neural Network learns patterns from the training data and predicts the output accurately.
